Sample Geometry Test Question and Solution

Sample Question:

In triangle ABC, angle A measures 50 degrees, and angle B measures 60 degrees. Find the measure of angle C and explain the reasoning.

Solution:

Since the sum of the interior angles in a triangle is always 180 degrees, we can find angle C as follows:

- Sum of angles A and B: 50° + 60° = 110°
- Subtract from 180°: 180° - 110° = 70°
- Therefore, angle C measures **70 degrees**.

This problem demonstrates the application of the triangle angle sum theorem, a fundamental concept in geometry.

Conclusion

Achieving success in Houghton Mifflin geometry tests involves understanding the curriculum, practicing regularly, and applying effective study strategies.
